

SoftGenetics introducing MLPA analysis software at ACMG

State College PA. SoftGenetics a leading supplier of Analytical Software tools for Genetic Analysis, will be introducing its new Multiplex Ligation-dependent Probe Amplification (MLPA) software at the 2006 American College of Medical Genetics (ACMG) annual meeting.

The new MLPA functionality of the company's GeneMarker software provides a completely integrated solution to MLPA analysis. The software collects electrophoresis separation data, automatically normalized data, and prepares customized patient reports. The software is excellent for use with any MRC Holland kit, or similar technology. For detailed information visit: <http://www.softgenetics.com/GeneMarkerMLPA.html>

Free 30 day trials of the software are available at ACMG booth 115, or downloadable from the SoftGenetics website: <http://www.softgenetics.com/downloads.html>
